A comprehensive lift for the entire midsection

A belt lipectomy addresses excess, sagging skin all the way around the midsection — front, sides, and back — offering a more complete solution than a tummy tuck alone, especially after major weight loss. At Sculpt Aesthetics in Madhapur, Hyderabad, Belt Lipectomy is performed by experienced plastic surgeons **Dr. Jagadish Kiran** and **Dr. Suma Sandhyala**, using modern techniques and a patient-first approach — so you always know what to expect, step by step.

Understanding Belt Lipectomy

Belt lipectomy (circumferential body lift) removes a continuous band of excess skin and fat around the entire waist and torso, lifting and tightening the abdomen, flanks, and lower back together in one coordinated procedure.

Many people considering Belt Lipectomy have questions or feel a little unsure about where to start — that's completely normal. Our team takes time during your first visit to explain things in plain language, so you can make a confident, informed decision at your own pace.

Signs You May Be a Good Candidate

You might be a good fit for this treatment if any of the following sound familiar:

- Patients with significant excess skin encircling the entire midsection, often after major weight loss
- Those for whom a tummy tuck alone would not fully address the back and flank areas
- Individuals in good general health, at a stable weight, seeking a comprehensive contouring solution

The best way to know for sure is a one-on-one consultation, where your surgeon reviews your health history and goals in detail.

How Belt Lipectomy Works: Step by Step

Step 1: Consultation & Evaluation

You'll meet with your surgeon to discuss your goals, medical history, and concerns. This is the time to ask questions and understand whether Belt Lipectomy is right for you.

Step 2: Personalized Planning

Your surgeon examines your body structure and designs a plan for Belt Lipectomy that fits your anatomy, so results look natural and balanced.

Step 3: The Procedure

Belt Lipectomy is performed in a modern, sterile operation theatre under appropriate anesthesia, following strict safety protocols throughout.

Step 4: Recovery & Follow-Up

You're monitored closely after the procedure, with clear aftercare instructions and scheduled follow-up visits to track healing and results.

Our Approach

An incision encircles the lower torso, allowing your surgeon to remove excess skin and tighten underlying tissue continuously around the abdomen, hips, and lower back — often combined with liposuction for more refined final contouring.

Benefits

Here's what patients typically gain from Belt Lipectomy:

✓ Comprehensive contouring around the entire midsection ✓ Firmer abdomen, flanks, and lower back in one procedure ✓ Ideal complement to major weight loss

Recovery Timeline

Recovery looks a little different for everyone, but here's a general idea of what to expect:

This is a more extensive procedure; most patients need 3-6 weeks before resuming normal activity, with a longer period before strenuous exercise, as guided by your surgeon.

Your surgeon will give you a personalized recovery plan, along with clear guidance on activity levels, medication, and follow-up visits, so healing stays on track.

Pricing

The cost of Belt Lipectomy depends on factors like the technique used, extent of treatment, and your individual assessment — so we don't quote a fixed price online. **Contact us at 9639635454 / 9133733733 for personalized, tentative pricing** after a consultation. *(Editor note: replace this placeholder with confirmed price ranges once finalized.)*

Scars & Marks

The resulting scar encircles the lower torso, typically positioned to sit low enough to be hidden by most underwear and swimwear; your surgeon will discuss expected scar appearance in detail given the more extensive nature of this procedure.

Safety & Things to Consider

Like any surgical procedure, this treatment carries general surgical risks, which your surgeon will explain in detail during consultation. At Sculpt Aesthetics, we follow international safety standards, strict infection-control protocols, and modern operation theatre facilities to keep every procedure as safe as possible. A thorough medical evaluation before

surgery helps make sure the procedure is right for you.

Frequently Asked Questions

How is this different from a tummy tuck? A tummy tuck addresses the front of the abdomen, while a belt lipectomy treats the entire circumference of the torso, including the back and flanks.

Is this typically done after bariatric surgery? Yes, it's a common and often significant step in body-contouring plans following major weight loss from bariatric surgery or other methods.

Is the procedure painful? Most patients feel minimal discomfort during Belt Lipectomy itself, since it is performed under anesthesia. Some soreness in the days after is normal and manageable with prescribed medication.

How long does the surgery take? This depends on the extent of the procedure and will be explained clearly during your consultation, once your specific plan is finalized.

When will I see the final results? You'll notice initial changes as swelling reduces over the first few weeks, with final results becoming clearer over the following months.

Can this be combined with a thigh lift or arm lift? Yes, many patients undergoing major-weight-loss body contouring combine belt lipectomy with a thigh lift, arm lift, or breast procedure over a staged treatment plan.
