Enhance your shape using your own body's fat

Fat grafting uses the patient's own fat, collected through liposuction, and transfers it to the breast area for natural volume enhancement and improved body contour. At Sculpt Aesthetics in Madhapur, Hyderabad, Breast Fat Grafting is performed by experienced plastic surgeons **Dr. Jagadish Kiran** and **Dr. Suma Sandhyala**, using modern techniques and a patient-first approach — so you always know what to expect, step by step.

Understanding Breast Fat Grafting

Breast fat grafting is a two-step procedure: fat is first removed from an area with excess deposits via liposuction, purified, and then carefully injected into the breast to add natural volume and improve shape.

Many people considering Breast Fat Grafting have questions or feel a little unsure about where to start — that's completely normal. Our team takes time during your first visit to explain things in plain language, so you can make a confident, informed decision at your own pace.

Signs You May Be a Good Candidate

You might be a good fit for this treatment if any of the following sound familiar:

- Women seeking modest, natural-looking breast enhancement
- Patients with sufficient donor fat available elsewhere on the body
- Those who prefer to avoid implants

The best way to know for sure is a one-on-one consultation, where your surgeon reviews your health history and goals in detail.

How Breast Fat Grafting Works: Step by Step

Step 1: Consultation & Evaluation

You'll meet with your surgeon to discuss your goals, medical history, and concerns. This is the time to ask questions and understand whether Breast Fat Grafting is right for you.

Step 2: Personalized Planning

Your surgeon examines your body structure and designs a plan for Breast Fat Grafting that fits your anatomy, so results look natural and balanced.

Step 3: The Procedure

Breast Fat Grafting is performed in a modern, sterile operation theatre under appropriate anesthesia, following strict safety protocols throughout.

Step 4: Recovery & Follow-Up

You're monitored closely after the procedure, with clear aftercare instructions and scheduled follow-up visits to track healing and results.

Our Approach

Fat is harvested from donor areas such as the abdomen or thighs, processed for purity, and then meticulously injected in layers into the breast tissue to achieve smooth, natural results while also contouring the donor site.

Benefits

Here's what patients typically gain from Breast Fat Grafting:

✓ Natural enhancement using the body's own tissue ✓ Dual benefit — contours donor area while enhancing breasts ✓ Soft, natural look and feel

Additional Details You Should Know

The Role of Liposuction in Fat Grafting

Because breast fat grafting begins with liposuction to harvest donor fat, the same liposuction principles apply — the donor area (commonly the abdomen, flanks, or thighs) is contoured at the same time, giving you a dual benefit: a slimmer donor area and enhanced breast volume.

Recovery Timeline

Recovery looks a little different for everyone, but here's a general idea of what to expect:

Recovery involves care at both the donor site and the breast area; most patients resume normal activities within 1–2 weeks.

Your surgeon will give you a personalized recovery plan, along with clear guidance on activity levels, medication, and follow-up visits, so healing stays on track.

Pricing

The cost of Breast Fat Grafting depends on factors like the technique used, extent of treatment, and your individual assessment — so we don't quote a fixed price online. **Contact us at 9639635454 / 9133733733 for personalized, tentative pricing** after a consultation. *(Editor note: replace this placeholder with confirmed price ranges once finalized.)*

Scars & Marks

Scarring is limited to tiny liposuction entry points at the donor site and small injection points on the breast, both of which fade to be barely visible.

Safety & Things to Consider

Like any surgical procedure, this treatment carries general surgical risks, which your surgeon will explain in detail during consultation. At Sculpt Aesthetics, we follow international safety standards, strict infection-control protocols, and modern operation theatre facilities to keep every procedure as safe as possible. A thorough medical evaluation before surgery helps make sure the procedure is right for you.

Frequently Asked Questions

Is fat transfer permanent? Transferred fat can provide long-lasting results, though some absorption may occur.

Is the procedure painful? Most patients feel minimal discomfort during Breast Fat Grafting itself, since it is performed under anesthesia. Some soreness in the days after is normal and manageable with prescribed medication.

How long does the surgery take? This depends on the extent of the procedure and will be explained clearly during your consultation, once your specific plan is finalized.

When will I see the final results? You'll notice initial changes as swelling reduces over the first few weeks, with final results becoming clearer over the following months.

How much breast size increase can I expect from fat transfer? Fat grafting typically provides a modest, natural increase (often around half to one cup size per session); larger changes may need more than one session or a combination with implants.

Does fat grafting feel different from implants? Since it uses your own tissue, many patients feel the results look and feel very natural, though the exact feel depends on individual factors.
