Restore a firmer, more youthful breast position

A breast lift (mastopexy) raises and reshapes breasts that have begun to sag due to pregnancy, breastfeeding, weight changes, or natural aging — restoring a firmer, more youthful position without necessarily changing breast size.

At Sculpt Aesthetics in Madhapur, Hyderabad, Breast Lift (Mastopexy) is performed by experienced plastic surgeons **Dr. Jagadish Kiran** and **Dr. Suma Sandhyala**, using modern techniques and a patient-first approach — so you always know what to expect, step by step.

Understanding Breast Lift (Mastopexy)

Mastopexy is a surgical procedure that removes excess, stretched skin and repositions breast tissue and the nipple-areola complex higher on the chest, correcting sagging (ptosis) for a more lifted, youthful contour.

Many people considering Breast Lift (Mastopexy) have questions or feel a little unsure about where to start — that's completely normal. Our team takes time during your first visit to explain things in plain language, so you can make a confident, informed decision at your own pace.

Signs You May Be a Good Candidate

You might be a good fit for this treatment if any of the following sound familiar:

- Women with breasts that have lost firmness and now sit lower on the chest

- Those whose nipples point downward or fall below the breast crease
- Women who have finished breastfeeding and are not planning further pregnancies
- Patients who want a lifted shape without significantly changing size

The best way to know for sure is a one-on-one consultation, where your surgeon reviews your health history and goals in detail.

How Breast Lift (Mastopexy) Works: Step by Step

Step 1: Consultation & Evaluation

You'll meet with your surgeon to discuss your goals, medical history, and concerns. This is the time to ask questions and understand whether Breast Lift (Mastopexy) is right for you.

Step 2: Personalized Planning

Your surgeon examines your body structure and designs a plan for Breast Lift (Mastopexy) that fits your anatomy, so results look natural and balanced.

Step 3: The Procedure

Breast Lift (Mastopexy) is performed in a modern, sterile operation theatre under appropriate anesthesia, following strict safety protocols throughout.

Step 4: Recovery & Follow-Up

You're monitored closely after the procedure, with clear aftercare instructions and scheduled follow-up visits to track healing and results.

Our Approach

Depending on the degree of sagging, your surgeon selects the appropriate lift technique — ranging from a minimal-scar approach for mild sagging to a full anchor-pattern lift for more significant cases — always aiming for the least visible scarring needed to achieve a lasting result. A lift can also be combined with implants or fat grafting if added volume is desired.

Benefits

Here's what patients typically gain from Breast Lift (Mastopexy):

- ✓ Firmer, more youthful breast position
- ✓ Improved nipple position and symmetry

- ✓ Can be combined with augmentation for added volume
- ✓ Boost in confidence and comfort in clothing

Recovery Timeline

Recovery looks a little different for everyone, but here's a general idea of what to expect:

Most patients resume light activities within a week, with full recovery and return to exercise over 4-6 weeks as guided by your surgeon.

Your surgeon will give you a personalized recovery plan, along with clear guidance on activity levels, medication, and follow-up visits, so healing stays on track.

Pricing

The cost of Breast Lift (Mastopexy) depends on factors like the technique used, extent of treatment, and your individual assessment — so we don't quote a fixed price online. **Contact us at 9639635454 / 9133733733 for personalized, tentative pricing** after a consultation. *(Editor note: replace this placeholder with confirmed price ranges once finalized.)*

Scars & Marks

Scar extent depends on the technique used, ranging from a scar around the areola only for mild lifts to an anchor-shaped incision for more significant sagging; all incisions are planned to fade and be as inconspicuous as possible.

Safety & Things to Consider

Like any surgical procedure, this treatment carries general surgical risks, which your surgeon will explain in detail during consultation. At Sculpt Aesthetics, we follow international safety standards, strict infection-control protocols, and modern operation theatre facilities to keep every procedure as safe as possible. A thorough medical evaluation before surgery helps make sure the procedure is right for you.

Frequently Asked Questions

Will a breast lift make my breasts smaller?

A lift primarily repositions tissue rather than removing significant volume; if you'd also like a size change, this can be combined with reduction or augmentation.

How long do breast lift results last?

Results are long-lasting, though future pregnancy, significant weight change, or natural aging can affect breast position over time.

Is the procedure painful?

Most patients feel minimal discomfort during Breast Lift (Mastopexy) itself, since it is performed under anesthesia. Some soreness in the days after is normal and manageable with prescribed medication.

How long does the surgery take?

This depends on the extent of the procedure and will be explained clearly during your consultation, once your specific plan is finalized.

When will I see the final results?

You'll notice initial changes as swelling reduces over the first few weeks, with final results becoming clearer over the following months.

Can a breast lift be combined with a reduction?

Yes — many patients with both sagging and excess volume benefit from combining a lift with a reduction in the same surgery.
