Lighter, proportionate, and more comfortable

Breast reduction removes excess breast tissue, fat, and skin to achieve a lighter, more proportionate breast size — relieving physical discomfort and improving daily comfort. At Sculpt Aesthetics in Madhapur, Hyderabad, Breast Reduction Surgery is performed by experienced plastic surgeons **Dr. Jagadish Kiran** and **Dr. Suma Sandhyala**, using modern techniques and a patient-first approach — so you always know what to expect, step by step.

Understanding Breast Reduction Surgery

Breast reduction (reduction mammoplasty) is a surgical procedure that removes excess breast tissue, fat, and skin to reduce breast size and reshape the breasts for better proportion and comfort.

Many people considering Breast Reduction Surgery have questions or feel a little unsure about where to start — that's completely normal. Our team takes time during your first visit to explain things in plain language, so you can make a confident, informed decision at your own pace.

Signs You May Be a Good Candidate

You might be a good fit for this treatment if any of the following sound familiar:

- Women experiencing back, neck, or shoulder discomfort from breast weight
- Those with skin irritation or posture issues linked to breast size
- Women facing difficulty with physical activity or clothing fit
- Patients seeking better body proportion

The best way to know for sure is a one-on-one consultation, where your surgeon reviews your health history and goals in detail.

How Breast Reduction Surgery Works: Step by Step

Step 1: Consultation & Evaluation

You'll meet with your surgeon to discuss your goals, medical history, and concerns. This is the time to ask questions and understand whether Breast Reduction Surgery is right for you.

Step 2: Personalized Planning

Your surgeon examines your body structure and designs a plan for Breast Reduction Surgery that fits your anatomy, so results look natural and balanced.

Step 3: The Procedure

Breast Reduction Surgery is performed in a modern, sterile operation theatre under appropriate anesthesia, following strict safety protocols throughout.

Step 4: Recovery & Follow-Up

You're monitored closely after the procedure, with clear aftercare instructions and scheduled follow-up visits to track healing and results.

Our Approach

The procedure is tailored to remove the appropriate volume of tissue while reshaping and repositioning the breast and nipple for a natural, balanced result, following a thorough evaluation of each patient's anatomy and goals.

Benefits

Here's what patients typically gain from Breast Reduction Surgery:

- ✓ Relief from back and neck discomfort
- ✓ Improved posture

- ✓ Better physical comfort during activity
- ✓ Enhanced confidence and clothing fit

Additional Details You Should Know

Mastopexy (Breast Lift) & Sagging

Breast reduction often naturally lifts the breast as part of the procedure, but in some cases a dedicated breast lift (mastopexy) technique is combined to further correct sagging and reposition the nipple for a more youthful, uplifted shape.

Addressing Asymmetry

For patients with uneven breast size alongside excess volume, your surgeon can tailor the amount of tissue removed on each side to improve both size and symmetry in the same procedure.

Recovery Timeline

Recovery looks a little different for everyone, but here's a general idea of what to expect:

Most patients resume normal daily activities within 1–2 weeks, with full recovery and return to strenuous activity over several weeks, guided by your surgeon.

Your surgeon will give you a personalized recovery plan, along with clear guidance on activity levels, medication, and follow-up visits, so healing stays on track.

Pricing

The cost of Breast Reduction Surgery depends on factors like the technique used, extent of treatment, and your individual assessment — so we don't quote a fixed price online. **Contact us at 9639635454 / 9133733733 for personalized, tentative pricing** after a consultation.

(Editor note: replace this placeholder with confirmed price ranges once finalized.)

Scars & Marks

Scar pattern depends on the amount of reduction needed — commonly an anchor- or lollipop-shaped incision is used, which fades considerably over the first year while still delivering meaningfully lighter, better-shaped breasts.

Safety & Things to Consider

Like any surgical procedure, this treatment carries general surgical risks, which your surgeon will explain in detail during consultation. At Sculpt Aesthetics, we follow international safety standards, strict infection-control protocols, and modern operation theatre facilities to keep every procedure as safe as possible. A thorough medical evaluation before surgery helps make sure the procedure is right for you.

Frequently Asked Questions

Who is a candidate for breast reduction?

Women experiencing discomfort, oversized breasts, or difficulty with daily activities may benefit from evaluation.

Will breast reduction leave visible scars?

Some scarring is expected with any surgical incision; technique and placement are chosen to minimize visibility.

Is the procedure painful?

Most patients feel minimal discomfort during Breast Reduction Surgery itself, since it is performed under anesthesia. Some soreness in the days after is normal and manageable with prescribed medication.

How long does the surgery take?

This depends on the extent of the procedure and will be explained clearly during your consultation, once your specific plan is finalized.

When will I see the final results?

You'll notice initial changes as swelling reduces over the first few weeks, with final results becoming clearer over the following months.

Will breast reduction affect nipple sensation?

Some temporary changes in sensation are common after surgery and typically improve as healing progresses; permanent changes are uncommon but will be discussed as part of informed consent.

Can breast reduction help with back pain from large breasts?

Yes — relieving the physical weight and strain of oversized breasts is one of the most common and effective benefits of this surgery.
