Natural, permanent hair restoration

Hair transplantation restores natural-looking hair growth through advanced transplantation techniques using the patient's own hair follicles.

At Sculpt Aesthetics in Madhapur, Hyderabad, Hair Transplantation is performed by experienced plastic surgeons **Dr. Jagadish Kiran** and **Dr. Suma Sandhyala**, using modern techniques and a patient-first approach — so you always know what to expect, step by step.

Understanding Hair Transplantation

Hair transplantation involves relocating healthy hair follicles from a donor area (typically the back of the scalp) to areas of thinning or baldness, providing a natural, permanent restoration of hair growth.

Many people considering Hair Transplantation have questions or feel a little unsure about where to start — that's completely normal. Our team takes time during your first visit to explain things in plain language, so you can make a confident, informed decision at your own pace.

Signs You May Be a Good Candidate

You might be a good fit for this treatment if any of the following sound familiar:

- Men with male pattern baldness

- Individuals experiencing hair thinning or a receding hairline
- Patients with sufficient healthy donor hair

The best way to know for sure is a one-on-one consultation, where your surgeon reviews your health history and goals in detail.

How Hair Transplantation Works: Step by Step

Step 1: Consultation & Hair Assessment

Your surgeon examines your scalp, hair density, and donor area to understand the cause and extent of hair loss.

Step 2: Customized Planning

A treatment plan is designed around your natural hairline and the number of grafts needed for a full, natural look.

Step 3: The Procedure

Healthy hair follicles are carefully moved from the donor area to thinning or bald areas, following your natural hair growth direction.

Step 4: Recovery & Regrowth

You'll be guided through scalp care in the days after the procedure, and shown what to expect as new hair grows in over the following months.

Our Approach

Follicles are carefully harvested from the donor area and transplanted individually into thinning or bald areas, following each patient's natural hairline and hair growth pattern for a seamless, undetectable result.

Benefits

Here's what patients typically gain from Hair Transplantation:

- ✓ Natural, permanent hair growth
- ✓ Uses the patient's own hair follicles
- ✓ Restores a natural hairline
- ✓ Long-term improvement in confidence

Recovery Timeline

Recovery looks a little different for everyone, but here's a general idea of what to expect:

Initial healing takes about 7–10 days, with transplanted hair shedding and then regrowing naturally over several months.

Your surgeon will give you a personalized recovery plan, along with clear guidance on activity levels, medication, and follow-up visits, so healing stays on track.

Pricing

The cost of Hair Transplantation depends on factors like the technique used, extent of treatment, and your individual assessment — so we don't quote a fixed price online. **Contact us at 9639635454 / 9133733733 for personalized, tentative pricing** after a consultation.

(Editor note: replace this placeholder with confirmed price ranges once finalized.)

Scars & Marks

Modern follicular extraction techniques leave tiny, dot-like marks in the donor area that are easily hidden by surrounding hair, without a single long linear scar.

Safety & Things to Consider

Hair transplantation is a well-established, minimally invasive procedure with a strong safety record when performed by trained specialists. Your surgeon will review your scalp condition and medical history to confirm you're a suitable candidate before proceeding.

Frequently Asked Questions

How long until I see new hair growth?

Transplanted hair usually sheds first, then regrows gradually, with visible new growth typically starting around 3-4 months and continuing to improve over a year.

Is hair transplant a permanent solution?

Transplanted follicles are generally resistant to further hair loss, offering long-term, natural results.

How many grafts will I need?

This depends on the extent of your hair loss and desired density, and will be estimated during your scalp assessment.

Can women get hair transplants too?

Yes, hair transplantation can be suitable for certain patterns of female hair thinning, following an individual evaluation.
