Fast relief from pain and recurrence

Ingrown toenail surgery removes problematic nail portions to relieve pain and prevent recurrence, offering fast, effective relief.

At Sculpt Aesthetics in Madhapur, Hyderabad, Ingrown Toenail Surgery is performed by experienced plastic surgeons **Dr. Jagadish Kiran** and **Dr. Suma Sandhyala**, using modern techniques and a patient-first approach — so you always know what to expect, step by step.

Understanding Ingrown Toenail Surgery

An ingrown toenail occurs when the edge of the nail grows into the surrounding skin, causing pain, swelling, and sometimes infection. Surgery removes the offending nail edge or portion permanently.

Many people considering Ingrown Toenail Surgery have questions or feel a little unsure about where to start — that's completely normal. Our team takes time during your first visit to explain things in plain language, so you can make a confident, informed decision at your own pace.

Signs You May Be a Good Candidate

You might be a good fit for this treatment if any of the following sound familiar:

- Individuals with recurrent or painful ingrown toenails
- Patients who have not responded to conservative home care

- Those with signs of infection around the nail

The best way to know for sure is a one-on-one consultation, where your surgeon reviews your health history and goals in detail.

How Ingrown Toenail Surgery Works: Step by Step

Step 1: Consultation & Diagnosis

Your surgeon examines the area and confirms whether Ingrown Toenail Surgery is the right treatment for your specific situation.

Step 2: Preparing for the Procedure

You'll receive simple pre-procedure instructions, and the treatment area is prepared under sterile conditions.

Step 3: The Procedure

Ingrown Toenail Surgery is usually completed quickly, often under local anesthesia, in a single outpatient visit.

Step 4: Aftercare

You'll get straightforward aftercare guidance to support quick, comfortable healing.

Our Approach

Under local anesthesia, the ingrown portion of the nail is carefully removed, with the nail bed treated to reduce the chance of recurrence.

Benefits

Here's what patients typically gain from Ingrown Toenail Surgery:

- ✓ Fast pain relief
- ✓ Reduced risk of recurrence
- ✓ Quick outpatient procedure with local anesthesia

Additional Details You Should Know

Preventing Recurrence

Along with removing the problematic nail edge, your surgeon may treat the nail bed (matrixectomy) to reduce the likelihood of the same section of nail becoming ingrown again in the future.

Recovery Timeline

Recovery looks a little different for everyone, but here's a general idea of what to expect:

Most patients can walk comfortably the same day, with full healing over 1–2 weeks.

Your surgeon will give you a personalized recovery plan, along with clear guidance on activity levels, medication, and follow-up visits, so healing stays on track.

Pricing

The cost of Ingrown Toenail Surgery depends on factors like the technique used, extent of treatment, and your individual assessment — so we don't quote a fixed price online. **Contact us at 9639635454 / 9133733733 for personalized, tentative pricing** after a consultation. *(Editor note: replace this placeholder with confirmed price ranges once finalized.)*

Safety & Things to Consider

This is a minor procedure with a low overall risk profile when performed by an experienced surgeon under sterile conditions. Your surgeon will still walk you through the small risks involved, such as infection or scarring, so you know exactly what to expect.

Frequently Asked Questions

Will I need general anesthesia?

Most minor procedures like this are done comfortably under local anesthesia, so you stay awake but feel no pain in the area.

Will there be a visible scar?

Incisions are small and carefully placed to minimize visible scarring, and they typically fade well over time.

Will I be able to walk immediately after?

Most patients can walk with mild care right after the procedure, though comfortable footwear is recommended for a few days.

Can both feet be treated in one visit?

Yes, if needed, both feet or multiple toes can often be treated in the same session.
