Safe removal of benign fatty lumps

Lipoma removal addresses benign fatty lumps under the skin, offering both cosmetic improvement and relief from any associated discomfort.

At Sculpt Aesthetics in Madhapur, Hyderabad, Lipoma Removal is performed by experienced plastic surgeons **Dr. Jagadish Kiran** and **Dr. Suma Sandhyala**, using modern techniques and a patient-first approach — so you always know what to expect, step by step.

Understanding Lipoma Removal

A lipoma is a soft, benign, slow-growing lump of fat cells that forms beneath the skin. While generally harmless, removal may be recommended for cosmetic reasons, growth, or discomfort.

Many people considering Lipoma Removal have questions or feel a little unsure about where to start — that's completely normal. Our team takes time during your first visit to explain things in plain language, so you can make a confident, informed decision at your own pace.

Signs You May Be a Good Candidate

You might be a good fit for this treatment if any of the following sound familiar:

- Individuals with a lipoma causing discomfort or cosmetic concern
- Patients with a growing or changing lump requiring evaluation

The best way to know for sure is a one-on-one consultation, where your surgeon reviews your health history and goals in detail.

How Lipoma Removal Works: Step by Step

Step 1: Consultation & Diagnosis

Your surgeon examines the area and confirms whether Lipoma Removal is the right treatment for your specific situation.

Step 2: Preparing for the Procedure

You'll receive simple pre-procedure instructions, and the treatment area is prepared under sterile conditions.

Step 3: The Procedure

Lipoma Removal is usually completed quickly, often under local anesthesia, in a single outpatient visit.

Step 4: Aftercare

You'll get straightforward aftercare guidance to support quick, comfortable healing.

Our Approach

The lipoma is surgically excised through a small, precisely placed incision, with the tissue typically sent for evaluation to confirm diagnosis.

Benefits

Here's what patients typically gain from Lipoma Removal:

- ✓ Removal of the visible lump
- ✓ Relief from any associated discomfort
- ✓ Quick outpatient procedure

Additional Details You Should Know

Lipomas vs. Cysts

While a lipoma is a soft lump of fat cells beneath the skin, a cyst is typically a fluid- or keratin-filled sac. Both are usually benign but are treated slightly differently — your surgeon will

confirm the type through examination (and, if needed, imaging) before recommending the right removal technique.

Recovery Timeline

Recovery looks a little different for everyone, but here's a general idea of what to expect:

Most patients resume normal activity within a few days, with minimal downtime.

Your surgeon will give you a personalized recovery plan, along with clear guidance on activity levels, medication, and follow-up visits, so healing stays on track.

Pricing

The cost of Lipoma Removal depends on factors like the technique used, extent of treatment, and your individual assessment — so we don't quote a fixed price online. **Contact us at 9639635454 / 9133733733 for personalized, tentative pricing** after a consultation.

(Editor note: replace this placeholder with confirmed price ranges once finalized.)

Scars & Marks

The incision is kept as small as possible and placed to blend with natural skin lines, healing into a fine, faint scar over time.

Safety & Things to Consider

This is a minor procedure with a low overall risk profile when performed by an experienced surgeon under sterile conditions. Your surgeon will still walk you through the small risks involved, such as infection or scarring, so you know exactly what to expect.

Frequently Asked Questions

Will I need general anesthesia?

Most minor procedures like this are done comfortably under local anesthesia, so you stay awake but feel no pain in the area.

Will there be a visible scar?

Incisions are small and carefully placed to minimize visible scarring, and they typically fade well over time.

Can a lipoma or cyst come back after removal?

Complete removal significantly reduces the chance of recurrence at the same site, though new lipomas can occasionally develop elsewhere.

Is a biopsy needed after removal?

Removed tissue is often sent for routine evaluation to confirm the diagnosis, especially for larger or unusual-looking lumps.
