Sculpt stubborn areas resistant to diet and exercise

Liposuction removes localized fat deposits from areas resistant to diet and exercise, creating a more sculpted, proportionate body profile.

At Sculpt Aesthetics in Madhapur, Hyderabad, Liposuction is performed by experienced plastic surgeons **Dr. Jagadish Kiran** and **Dr. Suma Sandhyala**, using modern techniques and a patient-first approach — so you always know what to expect, step by step.

Understanding Liposuction

Liposuction is a surgical procedure that removes excess, stubborn fat from specific body areas using thin cannulas, helping refine body contour rather than achieve overall weight loss.

Many people considering Liposuction have questions or feel a little unsure about where to start — that's completely normal. Our team takes time during your first visit to explain things in plain language, so you can make a confident, informed decision at your own pace.

Signs You May Be a Good Candidate

You might be a good fit for this treatment if any of the following sound familiar:

- Individuals near their ideal weight with localized fat deposits

- Patients with good skin elasticity
- Those seeking body contouring rather than weight loss

The best way to know for sure is a one-on-one consultation, where your surgeon reviews your health history and goals in detail.

How Liposuction Works: Step by Step

Step 1: Consultation & Evaluation

You'll meet with your surgeon to discuss your goals, medical history, and concerns. This is the time to ask questions and understand whether Liposuction is right for you.

Step 2: Personalized Planning

Your surgeon examines your body structure and designs a plan for Liposuction that fits your anatomy, so results look natural and balanced.

Step 3: The Procedure

Liposuction is performed in a modern, sterile operation theatre under appropriate anesthesia, following strict safety protocols throughout.

Step 4: Recovery & Follow-Up

You're monitored closely after the procedure, with clear aftercare instructions and scheduled follow-up visits to track healing and results.

Our Approach

Commonly treated areas include the arms, thighs, abdomen, love handles, flanks, bra rolls, and buttocks. Advanced techniques are used to remove fat precisely while sculpting a smooth, natural contour tailored to the patient's frame.

Benefits

Here's what patients typically gain from Liposuction:

- ✓ Sculpted, more proportionate body profile
- ✓ Precision fat removal in stubborn areas
- ✓ Improved clothing fit
- ✓ Boost in body confidence

Additional Details You Should Know

Areas We Treat

Liposuction can sculpt the arms, inner and outer thighs, love handles and flanks, bra rolls, abdomen, buttocks, saddle bags, back, lower legs, and neck — treatment areas are chosen based on your specific concerns and can often be combined in a single session.

Is Liposuction Right for Your BMI?

Liposuction works best for patients close to their ideal body weight (generally within a healthy-to-moderately-elevated BMI range) who have stubborn, localized fat rather than overall excess weight. Your surgeon will assess your BMI and overall health during consultation to confirm suitability and discuss realistic outcomes.

Ultrasound-Assisted & Power-Assisted Liposuction

We offer advanced liposuction technologies including Ultrasound-Assisted Liposuction, which gently liquefies fat for smoother, more precise removal, and Power-Assisted Liposuction, which uses rapid mechanical vibration to loosen fat more efficiently — both designed to improve precision and reduce recovery time compared to traditional techniques.

Recovery Timeline

Recovery looks a little different for everyone, but here's a general idea of what to expect:

Most patients return to light activity within a few days, with a compression garment worn for a few weeks to support healing and contour.

Your surgeon will give you a personalized recovery plan, along with clear guidance on activity levels, medication, and follow-up visits, so healing stays on track.

Pricing

The cost of Liposuction depends on factors like the technique used, extent of treatment, and your individual assessment — so we don't quote a fixed price online. **Contact us at 9639635454 / 9133733733 for personalized, tentative pricing** after a consultation. *(Editor note: replace this placeholder with confirmed price ranges once finalized.)*

Scars & Marks

Liposuction is performed through tiny entry points, just a few millimeters long, which typically fade to be barely noticeable within several months.

Safety & Things to Consider

Like any surgical procedure, this treatment carries general surgical risks, which your surgeon will explain in detail during consultation. At Sculpt Aesthetics, we follow international safety standards, strict infection-control protocols, and modern operation theatre facilities to keep every procedure as safe as possible. A thorough medical evaluation before surgery helps make sure the procedure is right for you.

Frequently Asked Questions

Does liposuction tighten skin?

Liposuction mainly removes fat. Skin tightening depends on skin elasticity and may require additional procedures.

Is the procedure painful?

Most patients feel minimal discomfort during Liposuction itself, since it is performed under anesthesia. Some soreness in the days after is normal and manageable with prescribed medication.

How long does the surgery take?

This depends on the extent of the procedure and will be explained clearly during your consultation, once your specific plan is finalized.

When will I see the final results?

You'll notice initial changes as swelling reduces over the first few weeks, with final results becoming clearer over the following months.

Is there a limit to how much fat can be removed safely in one session?

Yes, your surgeon follows established safety limits per session to protect your health, and may recommend multiple sessions for larger-volume goals.

Will the fat come back after liposuction?

Treated fat cells are permanently removed, though remaining fat cells can still grow with significant weight gain, so a stable lifestyle helps maintain results.
