Balanced, natural-looking ear shape and position

Otoplasty reshapes the ears to correct prominent, asymmetrical, or unusually shaped ears, helping create a more balanced, natural appearance.

At Sculpt Aesthetics in Madhapur, Hyderabad, Otoplasty (Ear Surgery) is performed by experienced plastic surgeons **Dr. Jagadish Kiran** and **Dr. Suma Sandhyala**, using modern techniques and a patient-first approach — so you always know what to expect, step by step.

Understanding Otoplasty (Ear Surgery)

Otoplasty is a surgical procedure that adjusts the size, shape, or position of the ears — most commonly to set prominent ears closer to the head or correct asymmetry between the two ears.

Many people considering Otoplasty (Ear Surgery) have questions or feel a little unsure about where to start — that's completely normal. Our team takes time during your first visit to explain things in plain language, so you can make a confident, informed decision at your own pace.

Signs You May Be a Good Candidate

You might be a good fit for this treatment if any of the following sound familiar:

- Individuals with ears that protrude more than they'd like

- Those with noticeable asymmetry between the two ears
- Both children (once ear cartilage has matured) and adults seeking correction

The best way to know for sure is a one-on-one consultation, where your surgeon reviews your health history and goals in detail.

How Otoplasty (Ear Surgery) Works: Step by Step

Step 1: Consultation & Evaluation

You'll meet with your surgeon to discuss your goals, medical history, and concerns. This is the time to ask questions and understand whether Otoplasty (Ear Surgery) is right for you.

Step 2: Personalized Planning

Your surgeon examines your body structure and designs a plan for Otoplasty (Ear Surgery) that fits your anatomy, so results look natural and balanced.

Step 3: The Procedure

Otoplasty (Ear Surgery) is performed in a modern, sterile operation theatre under appropriate anesthesia, following strict safety protocols throughout.

Step 4: Recovery & Follow-Up

You're monitored closely after the procedure, with clear aftercare instructions and scheduled follow-up visits to track healing and results.

Our Approach

Through a small incision behind the ear, your surgeon reshapes the underlying cartilage to achieve better proportion and position, taking care to preserve a natural fold and shape rather than an overly 'pinned back' look.

Benefits

Here's what patients typically gain from Otoplasty (Ear Surgery):

- ✓ More balanced, proportionate ear shape
- ✓ Improved confidence, especially for self-conscious patients
- ✓ Discreet incision behind the ear

Recovery Timeline

Recovery looks a little different for everyone, but here's a general idea of what to expect:

Most patients wear a protective headband for the first week and can return to normal activities, avoiding contact sports, within 2-4 weeks.

Your surgeon will give you a personalized recovery plan, along with clear guidance on activity levels, medication, and follow-up visits, so healing stays on track.

Pricing

The cost of Otoplasty (Ear Surgery) depends on factors like the technique used, extent of treatment, and your individual assessment — so we don't quote a fixed price online. **Contact us at 9639635454 / 9133733733 for personalized, tentative pricing** after a consultation.

(Editor note: replace this placeholder with confirmed price ranges once finalized.)

Scars & Marks

The incision is placed in the natural crease behind the ear, making it essentially invisible from the front once healed.

Safety & Things to Consider

Like any surgical procedure, this treatment carries general surgical risks, which your surgeon will explain in detail during consultation. At Sculpt Aesthetics, we follow international safety standards, strict infection-control protocols, and modern operation theatre facilities to keep every procedure as safe as possible. A thorough medical evaluation before surgery helps make sure the procedure is right for you.

Frequently Asked Questions

At what age can otoplasty be performed?

It can often be performed once ear cartilage has matured, sometimes as early as age 5-6 for children, or at any age for adults.

Is otoplasty painful?

Discomfort is generally mild and manageable with prescribed pain relief in the days following surgery.

Is the procedure painful?

Most patients feel minimal discomfort during Otoplasty (Ear Surgery) itself, since it is

performed under anesthesia. Some soreness in the days after is normal and manageable with prescribed medication.

How long does the surgery take?

This depends on the extent of the procedure and will be explained clearly during your consultation, once your specific plan is finalized.

When will I see the final results?

You'll notice initial changes as swelling reduces over the first few weeks, with final results becoming clearer over the following months.

Are the results permanent?

Yes, results are generally permanent, as the cartilage is reshaped and typically holds its new position long-term.
