Refined nasal shape, natural facial harmony

Rhinoplasty enhances nasal shape and facial harmony while maintaining a natural appearance and normal breathing function.

At Sculpt Aesthetics in Madhapur, Hyderabad, Rhinoplasty is performed by experienced plastic surgeons **Dr. Jagadish Kiran** and **Dr. Suma Sandhyala**, using modern techniques and a patient-first approach — so you always know what to expect, step by step.

Understanding Rhinoplasty

Rhinoplasty, or nose reshaping surgery, modifies the size, shape, or proportions of the nose to improve facial balance. It can be purely cosmetic or combined with functional correction to improve breathing.

Many people considering Rhinoplasty have questions or feel a little unsure about where to start — that's completely normal. Our team takes time during your first visit to explain things in plain language, so you can make a confident, informed decision at your own pace.

Signs You May Be a Good Candidate

You might be a good fit for this treatment if any of the following sound familiar:

- Individuals unhappy with nasal size, shape, or profile
- Patients with breathing difficulty related to nasal structure

- Those seeking improved facial harmony and balance

The best way to know for sure is a one-on-one consultation, where your surgeon reviews your health history and goals in detail.

How Rhinoplasty Works: Step by Step

Step 1: Consultation & Evaluation

You'll meet with your surgeon to discuss your goals, medical history, and concerns. This is the time to ask questions and understand whether Rhinoplasty is right for you.

Step 2: Personalized Planning

Your surgeon examines your body structure and designs a plan for Rhinoplasty that fits your anatomy, so results look natural and balanced.

Step 3: The Procedure

Rhinoplasty is performed in a modern, sterile operation theatre under appropriate anesthesia, following strict safety protocols throughout.

Step 4: Recovery & Follow-Up

You're monitored closely after the procedure, with clear aftercare instructions and scheduled follow-up visits to track healing and results.

Our Approach

Each rhinoplasty is planned around the patient's facial proportions and goals, addressing the bridge, tip, or overall nasal structure to create a refined, natural-looking result in harmony with the rest of the face.

Benefits

Here's what patients typically gain from Rhinoplasty:

- ✓ Improved nasal shape and profile
- ✓ Better facial harmony and balance
- ✓ Potential improvement in breathing function
- ✓ Natural, refined results

Additional Details You Should Know

Bone Grafts & Implants in Rhinoplasty

For patients needing significant structural change — such as building up a low bridge or providing support after revision surgery — your surgeon may use a bone or cartilage graft (often taken from the patient's own septum, ear, or rib) or, in select cases, a surgical implant. These techniques add structure and support while maintaining a natural-looking result, and the right choice depends on your nasal anatomy and goals.

Recovery Timeline

Recovery looks a little different for everyone, but here's a general idea of what to expect:

Most swelling subsides within 2–3 weeks, with final results becoming more apparent over several months as residual swelling resolves.

Your surgeon will give you a personalized recovery plan, along with clear guidance on activity levels, medication, and follow-up visits, so healing stays on track.

Pricing

The cost of Rhinoplasty depends on factors like the technique used, extent of treatment, and your individual assessment — so we don't quote a fixed price online. **Contact us at 9639635454 / 9133733733 for personalized, tentative pricing** after a consultation. *(Editor note: replace this placeholder with confirmed price ranges once finalized.)*

Scars & Marks

Most rhinoplasty is performed with incisions hidden inside the nose; when external incisions are needed (open technique), they are placed in the small strip of skin between the nostrils and heal to be very discreet.

Safety & Things to Consider

Like any surgical procedure, this treatment carries general surgical risks, which your surgeon will explain in detail during consultation. At Sculpt Aesthetics, we follow international safety standards, strict infection-control protocols, and modern operation theatre facilities to keep every procedure as safe as possible. A thorough medical evaluation before surgery helps make sure the procedure is right for you.

Frequently Asked Questions

Does rhinoplasty affect breathing?

Functional rhinoplasty can address both appearance and breathing concerns.

Is the procedure painful?

Most patients feel minimal discomfort during Rhinoplasty itself, since it is performed under anesthesia. Some soreness in the days after is normal and manageable with prescribed medication.

How long does the surgery take?

This depends on the extent of the procedure and will be explained clearly during your consultation, once your specific plan is finalized.

When will I see the final results?

You'll notice initial changes as swelling reduces over the first few weeks, with final results becoming clearer over the following months.

How long until swelling fully goes down?

Most visible swelling resolves within a few weeks, but subtle refinement of the nasal tip can continue for up to a year.

Can rhinoplasty fix a deviated septum?

Yes, functional rhinoplasty can correct a deviated septum at the same time as reshaping the nose, improving both breathing and appearance.
