Minimally invasive facial lifting

Thread lift is a minimally invasive lifting procedure for facial rejuvenation, using dissolvable threads to lift and tighten sagging skin. At Sculpt Aesthetics in Madhapur, Hyderabad, Thread Lift is performed by experienced plastic surgeons **Dr. Jagadish Kiran** and **Dr. Suma Sandhyala**, using modern techniques and a patient-first approach — so you always know what to expect, step by step.

Understanding Thread Lift

A thread lift uses fine, dissolvable medical threads inserted beneath the skin to gently lift and support sagging tissue, while also stimulating natural collagen production over time.

Many people considering Thread Lift have questions or feel a little unsure about where to start — that's completely normal. Our team takes time during your first visit to explain things in plain language, so you can make a confident, informed decision at your own pace.

Signs You May Be a Good Candidate

You might be a good fit for this treatment if any of the following sound familiar:

- Individuals with mild to moderate facial sagging
- Patients seeking a lifting effect without surgical downtime

The best way to know for sure is a one-on-one consultation, where your surgeon reviews your health history and goals in detail.

How Thread Lift Works: Step by Step

Step 1: Consultation & Skin/Health Assessment

Your provider reviews your goals and checks whether Thread Lift suits your skin, hair, or health profile.

Step 2: Customized Plan

A treatment plan and, where relevant, a session schedule is created to match your specific needs.

Step 3: The Treatment

Thread Lift is performed in a comfortable clinical setting, usually taking well under an hour.

Step 4: Aftercare & Follow-Up

You'll receive simple aftercare tips, and your provider will track your progress over follow-up visits or sessions.

Our Approach

Threads are inserted through tiny entry points and positioned to lift targeted areas such as the cheeks, jawline, or brows, providing an immediate lift with continued improvement as collagen builds.

Benefits

Here's what patients typically gain from Thread Lift:

✓ Lifting effect without surgery ✓ Minimal downtime ✓ Stimulates natural collagen production

Recovery Timeline

Recovery looks a little different for everyone, but here's a general idea of what to expect:

Mild swelling or tenderness may last a few days; most patients resume normal activities immediately.

Your surgeon will give you a personalized recovery plan, along with clear guidance on activity levels, medication, and follow-up visits, so healing stays on track.

Pricing

The cost of Thread Lift depends on factors like the technique used, extent of treatment, and your individual assessment — so we don't quote a fixed price online. **Contact us at 9639635454 / 9133733733 for personalized, tentative pricing** after a consultation. *(Editor note: replace this placeholder with confirmed price ranges once finalized.)*

Scars & Marks

Thread lifts use tiny entry points rather than incisions, so there is no meaningful scarring — any mark from the entry point fades within days.

Safety & Things to Consider

This is a non-surgical treatment with minimal downtime and a good safety profile when performed by trained professionals using approved products. As with any injectable or energy-based treatment, mild, temporary side effects such as redness or swelling are possible and will be discussed during your consultation.

Frequently Asked Questions

How many sessions will I need? This varies by individual and goal — your provider will recommend a session plan during your consultation.

How long do the results last? Results vary depending on the treatment and individual factors like skin type and lifestyle; your provider can give you a realistic timeline.

How long do thread lift results last? Results typically last 12-18 months, depending on thread type and individual skin quality, and the procedure can be repeated to maintain the effect.

Is a thread lift a replacement for a surgical facelift? A thread lift offers a more subtle, non-surgical lift and is best suited for mild-to-moderate sagging; a surgical facelift addresses more significant laxity.
